

Nycon has been a leader in fiber products for 25 years. Nycon develops, manufactures, packages and distributes a full-line of fiber products for use in a broad range of cement-based, asphalt-based, plastic-based and soil-based applications. For all of these applications Nycon offers lightweight cellulose fibers that increase surface area and prolong service life of products.

## Benefits for Asphalt

- Prevent separation of asphalt from the aggregate – commonly referred to as “drain down.”
- Stabilizer in SMA (Stone Matrix Asphalt) and OGFC (Open Graded Friction Course)
- HMA lasts longer and out-performs conventional mixtures.

## Benefits for Concrete

- Easier to apply which results in labor savings
- Versatile application uses such as thin or irregular shaped sheets
- Reduces plastic shrinkage cracking
- Increase in flexural toughness

## Benefits for Plastic

- Greener product by reducing use of petroleum by products
- Can increase overall strength of plastic product
- Can increase ductility of plastic product

## Benefits for Hydroseeding

- Helps contain moisture necessary for seed germination
- Holds seed in place by protecting from environmental conditions
- Naturally breaks down over time without causing environmental damage
- Cost effective alternative to sod and conventional methods of seeding
