

CONTROLPC

Fibers for Secondary Reinforcement of Pre-Cast Applications

- Less labor than welded wire fabric (WWF)
- Enhance early green strength for stripping of molds
- Reduce bleed water
- Only synthetic fibers (nylon) that produce a smooth, hairless finish
- Less need for post-repair & patching
- Reduce spalling from rusting of steel
- Improve freeze-thaw durability
- Up to 92 million fibers per mix
- Increase impact resistance and reduce damage due to handling
- Reduce material costs and injury vs. WWF
- Provide toughness and increased ductility
- Produce a more homogeneous mix with less separation of material
- Decrease water penetration (permeability)

Helping you build smarter and better.
